

John Matthew Tolentino

FULLSTACK SOFTWARE DEVELOPER

contact@jmtol.dev | +63 927 165 0882 | jmtol.dev | linkedin.com/in/tolentinojm | Remote — Philippines

PROFILE

Fullstack Software Developer with 8+ years building web applications, APIs, and cloud systems in C#/.NET and JavaScript — most recently on a live SaaS product handling payment infrastructure and cloud migration at scale. I'm comfortable owning features end-to-end across the stack, and have spent meaningful time on the infrastructure and automation side as well. I work well in distributed Agile teams and have a track record of stepping into architecture and mentoring roles on the teams I've been part of.

PROFESSIONAL EXPERIENCE

Fullstack Software Developer

August 2020 – Present

Anytime Mailbox — www.anytimemailbox.com, Remote

- Led payment integration work with Stripe and other payment gateways — built out subscription billing, one-time charges, refunds, proration, and webhook event handling, replacing a slow in-house billing system and opening the platform up to future products.
- Worked across all three sides of the platform — customer-facing features (mailbox management, billing self-service), operator tools (mail handling workflows), and admin dashboards (account management, reporting, configuration).
- Contributed to the Azure cloud migration — wrote the data migration code to move hundreds of thousands of historical records to the new cloud environment.
- Day-to-day work is primarily in ASP.NET and an internal framework built up over time — C#/.NET on the backend, JavaScript and jQuery on the frontend, T-SQL and SQL Server for database.
- Own the third-party integration layer: tax compliance APIs, webhook pipelines, and a handful of external service connectors that need to stay in sync with the core platform.
- Became the internal point of contact for platform architecture questions — reviewed PRs, ran knowledge-sharing sessions, and helped 10+ engineers get up to speed on the cloud-migrated codebase.

Associate Software Engineer

April 2019 – August 2020

Infor PSSC, Inc. — Taguig, Manila, Philippines

- Worked on a Data Warehouse Designer tool built in C# and VB.NET — an internal application that lets users visually design and generate SSIS packages, simplifying the data warehousing process without hand-coding ETL pipelines.
- Heavy T-SQL work across both cloud and on-premises SQL Server environments — wrote stored procedures, reporting queries, and data transformation logic to support the generated SSIS packages and downstream BI reports.
- Automated several recurring ops tasks with PowerShell scripts, cutting the team's weekly manual maintenance work noticeably.
- Part of an Agile squad that pushed for better sprint habits — picked up technical debt alongside feature work rather than deferring it.

Associate Software Engineer

October 2017 – April 2019

Accenture Inc. — Taguig, Manila, Philippines

- Built an analytics dashboard in ReactJS and Web API that replaced a manual client reporting process — gave stakeholders a live view of their data instead of waiting on weekly exports.
- Designed and built ETL pipelines and SSRS reports as part of a data integration project spanning both Azure and AWS environments.
- Wrote cloud infrastructure automation scripts for AWS and Azure in support of the environment delivery team — reduced the number of manual environment checks and provisioning steps the team ran each week.

- Monitored a fleet of 10,000+ servers to verify sites were up, meeting performance benchmarks, and compliant with infrastructure standards.
- Worked in a global Scrum team across multiple timezones — got comfortable with async-first collaboration and documentation quickly.

TECHNICAL SKILLS

LANGUAGES & FRAMEWORKS

C# .NET / ASP.NET Core JavaScript TypeScript React Next.js Node.js VB.NET
Entity Framework / EF Core T-SQL HTML / CSS

API & ARCHITECTURE

RESTful API Microservices Event-Driven Architecture GraphQL SignalR / WebSockets RabbitMQ
Apache Kafka Swagger / OpenAPI

INTEGRATIONS & PAYMENTS

Stripe Authorize.NET Billing & Subscriptions Tax Compliance APIs Webhooks OAuth / JWT

CLOUD & DEVOPS

Azure App Services Azure Functions Azure Service Bus AWS EC2 / S3 / Lambda / RDS Docker CI/CD Pipelines
Cloud Migration

DATABASE & DATA ENG.

SQL Server PostgreSQL CosmosDB MongoDB Redis ETL / ELT SSIS SSRS Data Warehousing
Performance Tuning

OBSERVABILITY

Azure Application Insights Azure Monitor Sentry Datadog

AI & LLM INTEGRATION

Github Copilot Claude Code OpenAI API LangChain AI Agents n8n

PRACTICES & TOOLING

Agile / Scrum Git / GitHub / GitLab / Azure DevOps xUnit / NUnit TDD / BDD Technical Mentoring PowerShell

EDUCATION

Bachelor of Science in Information Systems

De La Salle University – Lipa

2016
